

The Regional Stroke Center at Faxton St. Luke's Healthcare (FSLH) presents:

# Identification of Stroke in the Field

An educational forum for EMS providers and those caring for acute stroke patients.

Scott S. Brehaut, MD, medical director for the Stroke Center at Faxton St. Luke's Healthcare (FSLH), will discuss the signs and symptoms of stroke and why the Cincinnati Stroke Scale may not be enough. He will expand upon the assessment of identifying posterior and frontal circulation strokes in the field and optimizing transfer times.

Naveen B. Seth, MD, associate medical director for the Emergency Department at FSLH, will discuss stroke mimics and how to identify the differences in the field. He will also present a case study to the group.

Lori M. Massaro, RN, MSN, CRNP, a representative from the University of Pittsburgh Medical Center Stroke Institute in Pittsburgh, Pennsylvania, will present "Stroke Center Optimization." She will discuss from the field to triage and transfer to the in-patient unit ways to identify stroke, improve door-to-needle times and how take the stroke center to the next level.
