

The Regional Stroke Center at Faxton St. Luke's Healthcare (FSLH) presents:

Identification of Stroke in the Field

An educational forum for EMS providers and those caring for acute stroke patients.

Scott S. Brehaut, MD, medical director for The Regional Stroke Center at FSLH, will present "Stroke Mimics and the Benefits of Hypothermia for Stroke Patients." Dr. Brehaut will also answer any stroke-related questions following his presentation. Participants may submit questions ahead of time to ensure they are covered. Questions can be emailed to Laura Love at llove@mvnhealth.com.

Angelina M. Roche, RN, BPS, CNRN, SCRNP, CPHQ, Stroke Program clinical coordinator, will present "NYSDOH ED-EMS Enhanced Communication Documentation." The key to the successful treatment of stroke patients is always time. The earlier a stroke is identified and communicated, the earlier treatment can be initiated. The emphasis of enhanced communication is to ensure we are giving our patients the highest quality of care. Roche will review the key elements of pre-hospital notification of stroke patients to the Emergency Department.

Wednesday, November 12, 2014 | 6:30pm to 9pm

Community Room
Center for Rehabilitation and Continuing Care Services
St. Luke's Campus
1650 Champlin Avenue, Utica, New York
